

EMQUEST™ EMQ-220

ETS-Lindgren's EMQuest EMQ-220 Antenna Measurement Software offers a wide range of fully parameterized test methods for measuring basic antenna performance metrics, as well as testing both radiated and conducted performance of various wireless devices. Whether you're designing antennas for stand-alone applications, or testing an embedded antenna system and radio module against many of the industry standard radiated performance test requirements, EMQuest EMQ-220 provides the flexibility to meet your testing needs.

Key Features

- Expandable Test Package
 - TRP/TIS Testing
- Testing Capabilities
 - Wireless Performance Testing
 - OTA Evaluation
- Site Validation and Calibration
- Parameter Entry and Data Acquisition
