DCD SR - SERIES - COUPLING/DECOUPLING NETWORKS FOR SIGNAL/DATA LINES

Surge pulses or Ring wave pulses are applied to unshielded unsymmetrical interconnection lines (signal/data lines) by means of standalone coupling/decoupling networks. For such testing AMETEK CTS offers a range of DCDs for 4 or 8 signal/data lines.

According to IEC/EN 61000-4-5 resp. IEC/EN 61000-4-12 the pulses are coupled via different coupling elements such as capacitors or gas arrestors depending on the characteristics of the data line signals.

HIGHLIGHTS

- › Coupling/decoupling networks according to IEC/EN 61000-4-5 and IEC/EN 61000-4-12
- › Interchangeable AE port protection modules
- › Line voltage 50 V, 250 V (other on request)
- › Test voltage up to 7 kV
- › Models with automatic coupling
- › EUT max. 600 VDC / 4 A
- › Differential mode or Common mode coupling

SURGE APPLICATION

DCD SR - SERIES - MULTIFUNCTIONAL COUPLING/DECOUPLING NETWORKS

The AMETEK CTS DCD sr - series of coupling decoupling networks are multifunctional CDNs for the application of Surge and Ringwave pulses onto signal/data lines.

The standard DCD sr - models combine three different applications; coupling of Surge pulse via capacitor or gas arrestor and coupling of Ring wave pulses via capacitor being required by the relevant standards. The required coupling mode can easily be selected.

The surge coupling GTD (Gas Discharge Tube) is inside a simple jumper and can be changed depends the application with an ABD plug (Avalanche Breaking Diode). There are also two plugs for using an individual external coupling device.

The DCD sr series also has the required decoupling inductors (20 mH) for each line. To protect the measuring system, an interchangeable, pluggable voltage protection module with overvoltage protection for 50 VDC is included in the delivery at the signal/data line inputs on the AE port. Each module protects 4 lines, so that coupling networks with 8 lines require two modules.

AMETEK CTS offers coupling networks for various voltage pulses up to 7 kV as well as for signal currents up to 4 A. Various modules for 50 VDC and 250 VAC are available for pluggable voltage protection on the AE port. Protection modules for signal voltages up to 600 VDC are available on request.

Dedicated CDNs are available e.g. for railway applications as per EN 50121 and for other customer specific test applications.

COUPLING

MULTIFUNCTIONAL COUPLING FOR SURGE AND RINGWAVE

The AMETEK DCD sr - series of coupling decoupling networks are multifunctional CDNs for the application of Surge and Ringwave pulses onto signal/data lines.

Surge as per IEC 61000-4-5 Ed.3, Figure 9

- Capacitor 0.5 μF with 40 Ohm
- GDT gas arrestor with 40 Ohm

Ringwave as per IEC 61000-4-12 Ed.3, Figure 8

- Capacitor $\geq 3 \mu\text{F}$
